

# NEU-2512

## STARTING MANUAL

**MAINTENANCE**

**DOSAGE**

**SPARE PARTS**

*Please read and follow this operating manual before putting the machine into operation.*

Seed Drills and Fertilizer Spreaders **SOLA** are produced in a factory particularly specialized in this kind of machines and they are guaranteed for the experience of the users. They are machines based on state-of-the-art technology and are manufactured with recognized safety requirements for doing an excellent work with a minimal maintenance. The purpose of this operating manual is to enable you to familiarise yourself with the working of your seed drill and to achieve your purposes.

## 1. INTRODUCTION

Before you proceed to operate the seed drill, please read and observe these instructions. In this way, you will avoid accidents, reduce repair costs and downtimes and increase the reliability and service life of your seed drill. This operating manual must be read and used by all persons who are required to work with the seed drill (including preparatory work, troubleshooting during operation, care), maintenance (inspection and technical servicing) and transporting. Pay particular attention to the safety instructions. **SOLA** cannot assume any liability for damage or malfunctions caused by a failure to observe the instructions contained in this operating manual. First of all, the manual will explain the Technical Specifications, the Safety Instructions, and some Essential Concepts for sowing. In the chapters PRIOR TO SOWING and MAINTENANCE, the manual will explain the basic instructions for working with the machine. This manual is finished with a Dosage Table with different types of seeds.

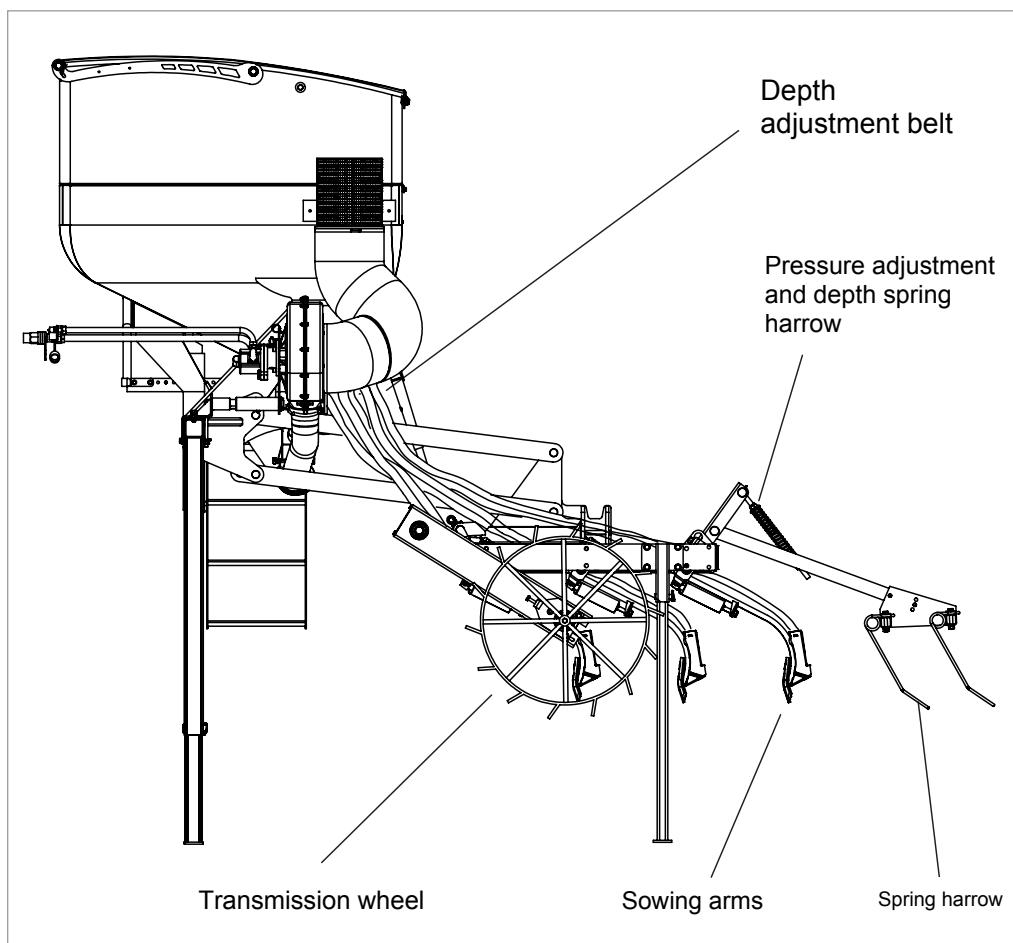

**SOLA** RESERVES THE RIGHT TO MAKE CHANGES TO THE ILLUSTRATIONS, TECHNICAL SPECIFICATIONS AND WEIGHTS CONTAINED IN THIS OPERATING MANUAL IF SOLA MAKES ANY IMPROVEMENTS TO THE SEED DRILL

## 2. TECHNICAL SPECIFICATIONS

### 2.1 TECHNICAL SPECIFICATIONS

TYPE AND ARMS	ARMS DISTANCE	WORKING WIDTH	HOPPER CAPACITY	WEIGHT (KG)	TRANSPORT WIDTH
300/25	12 cm	3 m	1.600 / 2.000 L.	1.550 kg	3 m
350/29	12 cm	3,5 m	1.600 / 2.000 L.	1.610 kg	3,5 m
400/33	12,5 cm	4 m	1.600 / 2.000 L.	1.670 kg	4 m

### 2.2 STANDARD EQUIPMENT

- Capacity hopper: 1.600 or 2.000 l
- Selector sieve
- Hectare counter
- Electronic speed counter
- Seed level and distributor problems alarm
- Set of lights and working lamp
- Spring harrow
- Loading platform with access stairs
- Mechanical fan
- Arms with coulters
- Arms with discs
- Weighing machine, crank and grains counter Harrow

### 2.3 OPTIONAL EQUIPMENT

- Hydraulic markers
- Tramlines
- Manual shut-off valve
- Total sowing shut-off

## 3. SAFETY INSTRUCTIONS

### 3.1 SAFETY SYMBOLS

You will find, in this operating manual, three types of safety and danger symbols:

TO FACILITATE OPERATION WITH THE SEED DRILL.

AVOID FLUID ESCAPING UNDER PRESSURE. CONSULT OPERATING MANUAL FOR SERVICE PROCEDURES. DANGER OF SERIOUS..

TO AVOID DAMAGES ON THE SEED DRILL OR IN THE OPTIONAL EQUIPMENTS.

IF YOU ARE WORKING UNDER THE MACHINE, IT IS VERY IMPORTANT TO ASSURE IT, TO AVOID ITS COLLAPSE. DANGER OF SERIOUS LESIONS..

THIS SYMBOL WARNS OF THE RISK OF INJURY.

DO NOT PLACE UNDER TRACK MARKERS. DANGER OF SERIOUS LESIONS.

On the machine, you will find the following symbols:

PLEASE, READ ALL SAFETY INSTRUCTIONS CONTAINED IN THIS OPERATION MANUAL WITH CARE AND ALSO OBSERVE ALL WARNING SIGNS ATTACHED TO THE SEED DRILL.

COUPLING POINT TO RAISE THE MACHINE. DANGER OF SERIOUS LESIONS.

STAY AWAY OF THE TRACTOR BACK PART DURING THE COUPLING OPERATION, DURING THE COUPLING MANOEUVRE. DANGER OF SERIOUS LESIONS.

DIRECTION AND SPEED OF THE POWER POINT. (ONLY IN THE MACHINES WITH MECHANICAL FAN)

DO NOT PLACE UNDER THE SOWING EQUIPMENT OR UNDER SWINGING AREAS. DANGER OF SERIOUS LESIONS.

STOP THE TRACTOR ENGINE AND AVOID ITS START DURING THE MAINTENANCE OR REPAIRING WORKS IN THE SEED DRILL. CONSULT OPERATING MANUAL.

DO NOT RIDE ON THE SEED DRILL STAIRS WHEN THE MACHINE IS WORKING. DANGER OF SERIOUS LESIONS.

## 3.2 PROPER USE

- Seed drill NEU-2512 has been produced for the agricultural works, specially for cereals sowing and the other grain seeds.
- SOLA cannot be held liable for any consequential damage resulting from incorrect use, metering or distribution.
- All relevant accident prevention regulations, as well as other generally acknowledged safety and road traffic regulations, must be observed.
- SOLA seed drills are intended for sowing. Any uses other than those will automatically exempt SOLA from its/his liability in respect on ensuing damages.

## 3.3 GENERAL SAFETY ARRANGEMENTS

- Before to start the machine, it is very important to read the operation safety and road safety.
- Road traffic regulations must be observed when towing the seed drill on roads.
- No persons may be allowed to ride on the seed drill during the work and during the transport.
- Before to bring into operation the machine, it is very important to know the parts and the elements.
- Be extremely careful when coupling and uncoupling the seed drill to tractor. This operation involves a high risk of injury.
- The transmission of the power point must be fitted with a protective equipment and in good conditions.
- Avoid the turns of the protector tube with the chain. The side of the clutch will be fit in the seed drill.
- The transmission of the power point must be fitted when engine is stopped.
- Before to connect the power point, make sure that nobody is standing in dangerous proximity to the seed drill.
- Do not never abandon the seat drive during the work
- Do not place strange elements inside the hopper
- Before carrying out care or maintenance work, always de-pressurize the hydraulic system and switch off the p.t.o. shaft and the tractor engine.

- The hydraulic system generates extremely high pressures. All piping, hoses and connections must therefore be checked regularly for leakage and visible external damage. Useful life for these elements is not more than six years. You must change them after this time.
- When the seed drill is raised, the tractor front axle discharges. Verify that the charge is enough to avoid lodging danger. In this situation, verify direction and braking capacity.
- During the transport with the seed drill raised, block the descent control. Before descending of the tractor, place the machine on the ground and remove starting keys.
- Be extremely careful when working with the machine in raised position. Use support elements to avoid a possible descent of the machine.

# 4. ESSENTIAL CONCEPTS FOR SOWING

## 4.1 GROUND

Better soil condition is, best quality of sowing. Over big clods or variable furrows it is not possible to do a good work. Although SOLA machines are able to take hard efforts in extreme conditions, sowing will not be of good quality if the sowing land has not adequate conditions.

## 4.2 THE SEED

It is very important to use quality and clean seed, and, in the barley case, very well trimmed.

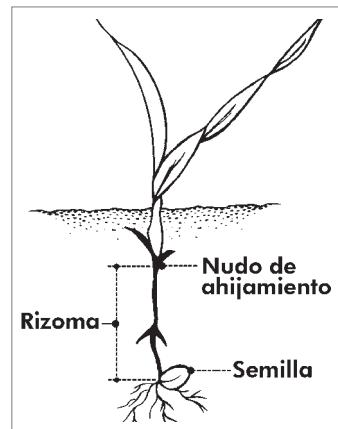

## 4.3 THE SOWING DEPTH

The suggested sowing depth is from 3 to 5 cm. To deeply too much is an error as the seed can not get the surface and death. It does not matter if some grains are visible as the harrow tines will cover them. Sowing depth has influence in the birth, vigour of the plant and consequently in its resistance to both frost and drought. The sprouting node will be always between 1 or 2 cm. under the surface, independently of the sowing depth. Deep sowing does not mean to have deep roots. Only a few roots arise from the bottom of the seed. The main root mass is born from the sprouting node, just under the ground level.

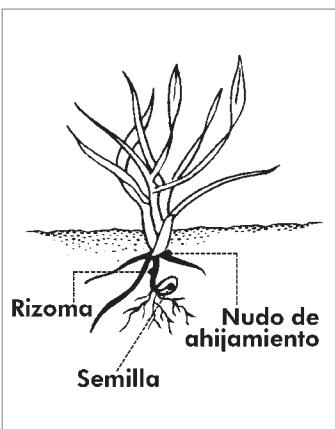

#### Sowing. Normal depth: from 2 to 4 cm

- Thick stem, short rhizome, good freezing endurance. Multiple sprouting, from 3 to 6 shoots and a lot of blades (from 6 to 10). Big tuft of roots, 5 cms wide and 10-12 cms depth. With less grains per square meters, we will obtain more ears.

#### Sowing. Very deep: from 8 to 10 cm

- Very thin stem. No sprouting and a single blade. The grain reserves become depleted by forming a large rhizome, Poor tuft of roots, just 1 cm wide and 3 depth. We need twice the grains per square meter to obtain the same quantity of ears as in the first case.

#### Sowing. Between 5 and 6 cm

- Thin stem, rhizome exposed to freezing. Delayed and poor sprouting, one shoot (sometimes none), not many blades. Medium tuft of roots, from 3 cm wide and 5 cms. depth. We need more grains per square meter to obtain the same quantity of ears as in the first case.

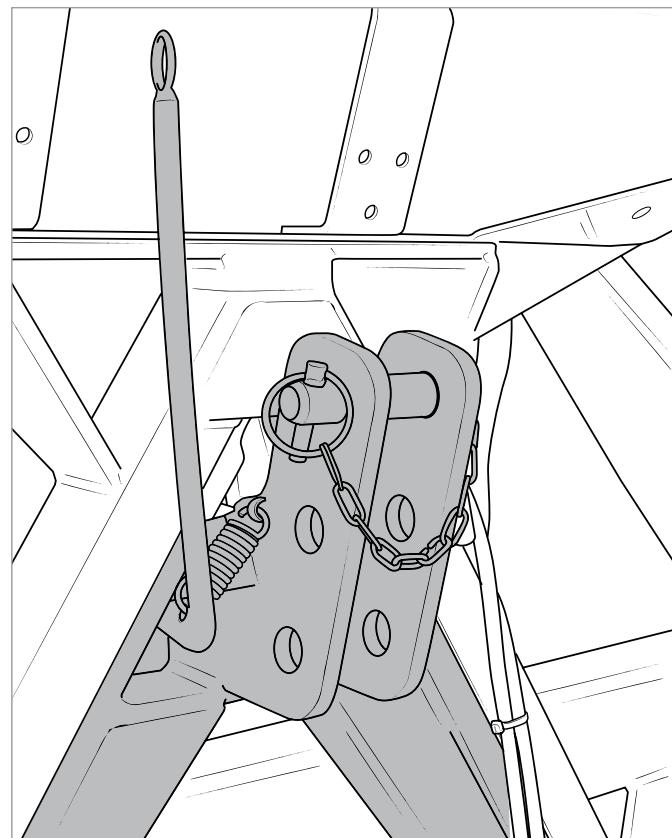

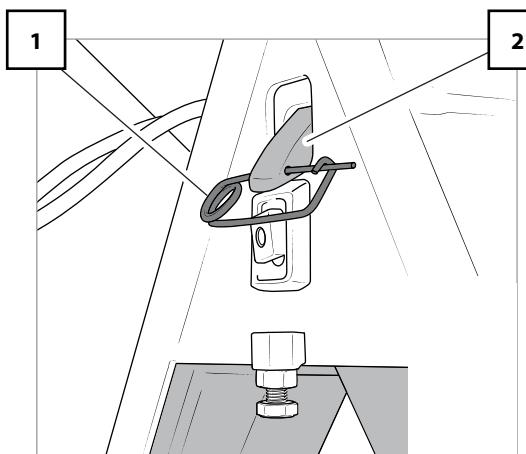

**WARNING:** IN VERY COLD PLACES, REPEATED FROSTBITE CAN HAVE A HONEYCOMB EFFECT ON THE GROUND'S MOST SUPERFICIAL LAYER. IN THIS CASE THE PLANT'S VERY FIRST ROOTS CAN LOOSEN AND THE PLANT WILL DIE. SLIGHTLY DEEPER PLANTING IS RECOMMENDED AND IF POSSIBLE, THE USE OF ROLLERS TO COMPACT THE EARTH TO BETTER PROTECT THE SEEDS.

## 5. STARTING

### 5.1 COUPLING THE SEED DRILL WITH HARROW

#### To coupling the seed drill with the harrow:

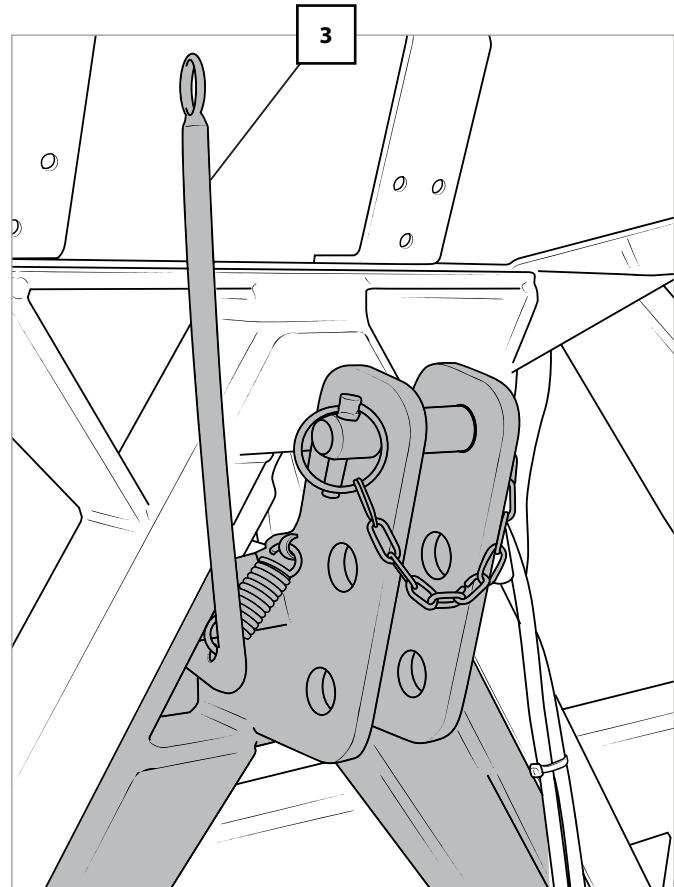

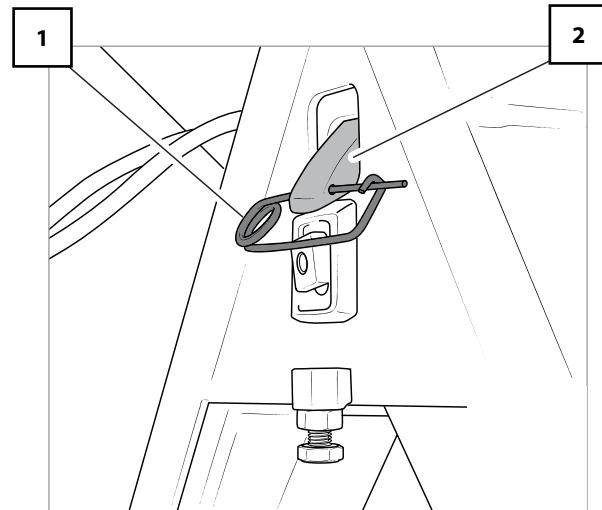

- Remove the safety link (1) of three point coupling.
- Introduce the three point coupling in the seed drill.
- Verify the pin (2) is well placed.
- Place the safety link again. (1)

## STARTING

### To remove the three point coupling of the seed drill to the harrow:

- Remove the safety link (1)
- Operate the lever (3) for releasing the pin (2)
- Place the safety link (1) again to avoid loss it.

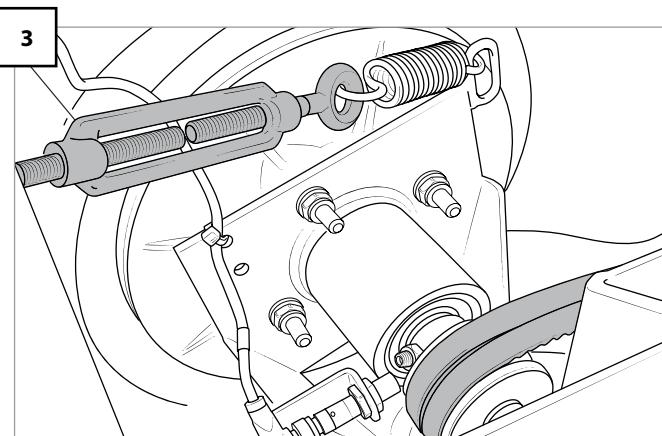

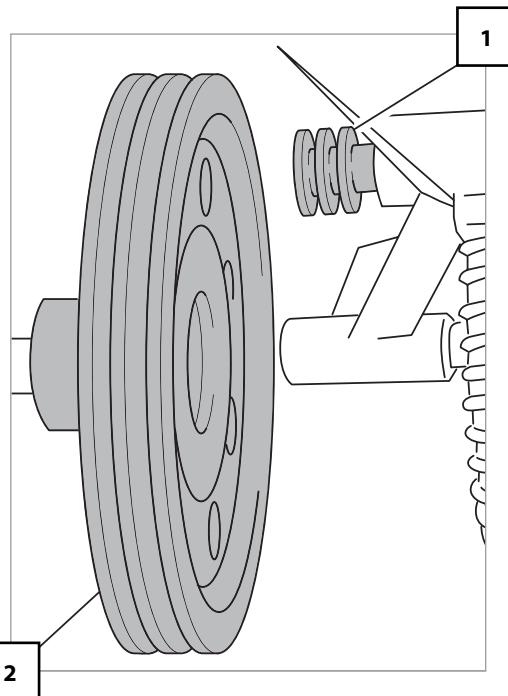

### 5.2 SETTING THE FAN BELTS

After coupling the harrow to the seed drill, it is very important to place distribution belts and adjust the tightening.

- Introduce the 2 belts in the seed drill pulley (1)
- Introduce the 2 belts in the harrow pulley (2)
- Setting tightening by the strut (3)

**NOTE:** IN THE FIRST INSTALLATION, KEEP THE PULLEYS ALIGNED DISPLACING THEM BY THE AXLES. BEFORE, WE HAVE UNSCREWED OF THE CENTRAL CONICAL ADJUSTMENT. ONCE ALIGNED SCREW THE CONICAL ALLEN BOLTS.

## 5.3 DOSAGE

We have two ways for doing dosage:

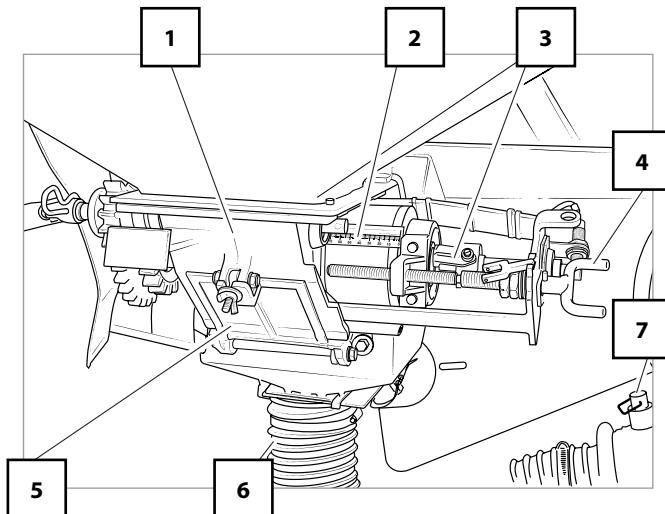

- For normal seed.
- For fine and small seed when sowing small quantities of seed.

### For normal seed :

- Set the red change-over switch (3).
- Set the spring clip-butterfly (7) to position N.

DO THIS ONLY WHEN THE METERING DEVICE IS ROTATING OR THE SEED HOPPER IS EMPTY.

<b>1.</b> Housing
<b>2.</b> Metering scale
<b>3.</b> Red change-over switch N = normal seed F = fine or small seed
<b>4.</b> Spindle
<b>5.</b> Hopper trap-door
<b>6.</b> Manifold
<b>7.</b> Spring clip-butterfly N = normal seed F = fine or small seed

### For fine seeds:

- Turn the spindle until the metering scale is in position 0.
- Turn the red change-over switch clockwise (3) until it engages in the groove in the hexagonal shaft.

The letter F on the red change-over switch will be visible. Now we can regulate from 0 to 25 of the metering scale. The spring clip on the butterfly valve of the fan (8) to position F.

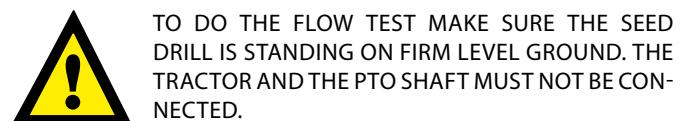

For doing the flow test:

- Close the hopper trap-door and fill the hopper with seed.
- Remove the manifold by unscrewing the wing nut.
- Place a bucket under the venturi cone outlet in order to collect the seed.
- Attach the crank in the left wheel of the seed drill and turn, giving the turns number as fol

TYPE MACHINE	TURNS
300/25	41,4 turns
350/29	35,5 turns
400/33	31,1 turns

The hectare counter will indicate 250 m<sup>2</sup>.

- Weight the seed collected. The seed drill flow in kg/ha will be the weight collected multiply by 40.
- If necessary repeat the operation until you consider the seed has been calibrated.
- Replace the cone venturi and secure it by the wing nut.

### DOSAGE TEST

Between the test done and the flow spreaded by the machine, can exist some differences, owing to the few pressure in the wheels, irregularities on the ground, etc., we can do an experimental test. With a tape measure, we can mark on the ground, the distance in meters indicated as the follows:

WORKING WIDTH	EXPERIMENTAL TEST - meters
300	83,3
350	71,4
400	62,5

Then, we can cover the market distance with the seed drill in working position. By means of a signal done in the wheel, we can count the wheel turns during the round. In this way, we obtain the turns number to do the seed dosage test. Doing the test with this number of turns, we will obtain the kgs per hectare that the machine will spread.

### ADJUSTMENT OF THE SEED DOSE

With current use of high quality seed, it is not enough to set the weight that has to be distributed by the seed drill, since the final results of the harvest will depends on the number of plants that reach complete ripeness. Each plant needs or requires its living space from which feeds on. In this way, as poor could be a high plant density as a low. To know or to decide the kgs per hectare to sowing, and to know the adequate dose, we must know the num-

## STARTING

ber of plants per square meter we are going to sow. By way of guidance, the plants number recommended for wheat and barley in dry land is as follows:

AUTUMN	SPRING
early sowing, 200 plants per m <sup>2</sup>	early sowing, 310 plants per m <sup>2</sup>
late sowing, 265 plants per m <sup>2</sup>	late sowing, 445 plants per m <sup>2</sup>

Notice that, in spring, sprouting is always lower and, consequently, we need to increase the quantity to sow.

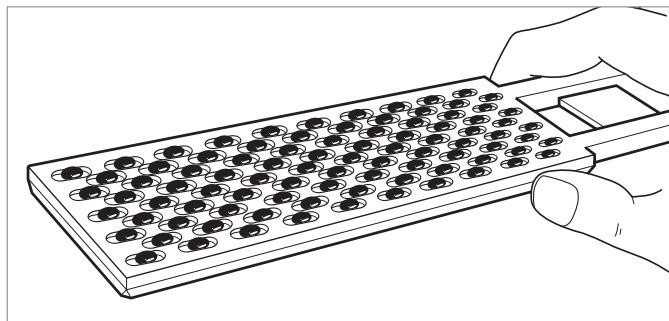

MAQUINARIA AGRÍCOLA SOLÀ, S.L., THINKS THAT IS VERY RECOMMENDABLE FOR THE FARMER, TO SEEK ADVICE ABOUT DOSAGE IN SOME TECHNICAL SOWING CENTRES.

THE SEED DOSE, MUST BE ADJUSTED TO EACH SOIL DEPENDING ON ITS TEXTURE, FERTILIZATION LEVEL, DAMPNESS AND SOWING TIME, GRAIN QUALITY, GERMINATE VALUE...

Moreover, it must be taken into account that the maximum germinate value is variable and depends on a lot of factors. Experimentally it can be placed between 70% and 80%, that is equivalent to multiply the number of grains to sow by 1,43 or 1,25 respectively. Find as follows, a practical method to obtain the kgs per hectare we are going to sow starting from the plants per square meter we want to obtain.

1. To introduce the grains counter in the seed (drawing 10). Get out, pass the hand on in order to have only a grain for each hole (100 grains in total). Repeat the operation 10 times in order to have 1000 grains.

2. Weight the 1000 grains collected. By this operation, we will have the OPERATIF WEIGHT.
3. Knowing the grains per square meter we are going to sow, kgs per hectare we have to adjust in the dosage control are:

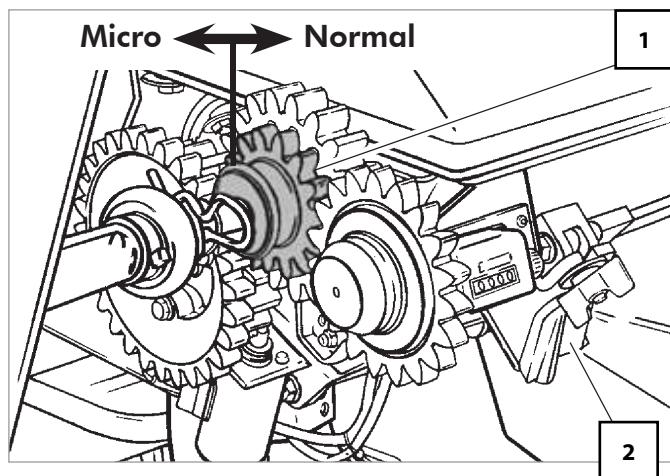

**kilos per hectare=**  
(grains per m<sup>2</sup> x OPERATIF WEIGHT) / 100.

## 5.4 MICRODOSAGE

The micrometering system serves as a means of metering fine seed and extremely small quantities of seed per hectare. The advantage of the micrometering system over the standard system when handling fine seed is that the cell is twice as wide for the same seed rate. This considerably enhances the self-cleaning properties of the cells.

Pull out the red gearwheel (1) until it engages in position .

The micrometering system is now switched on. The settings are given in the calibration chart for fine seed (page 15) with the micrometering system M.

1. Read gearwheel
2. Dispenser

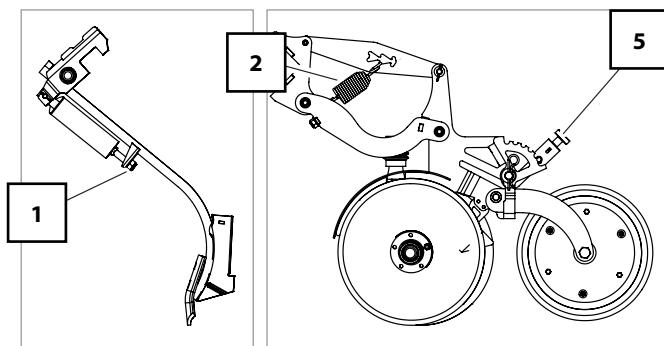

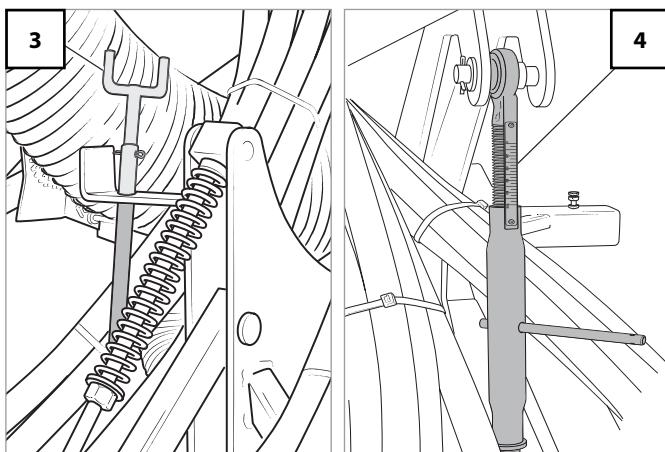

CHECK THE CLEANING BRUSH BEFORE SOWING WITH FINE SEED.

## 5.5 SETTING THE SOWING DEPTH

To adjust the sowing depth we can do the following operations:

- Adjusting the sowing PRESSURE arms, dependent arm:
  - Tine coulters (1).
  - Double discs (3).
  - Suffolk coulters and discs (2).
- Adjusting the working DEPTH (4).
  - \* For machines with double disc must also wheel adjustable depth control (5)

## 5.6 SETTING THE SPRING HARROW

The harrow has different positions for working on different ground types. We can adjust:

- **Height:**

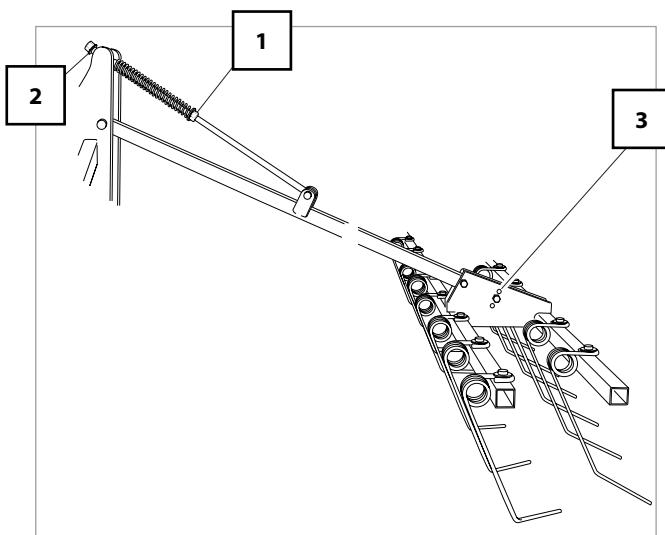

- tighten the lower bolt (2).

- **Pressure:**

- tighten the upper bolt of the brace rod (2).

- **Positions:**

- modifying the screws position (3).

## 5.7 HYDRAULIC TRACK MARKERS

**NOTE:** Sizes in cms

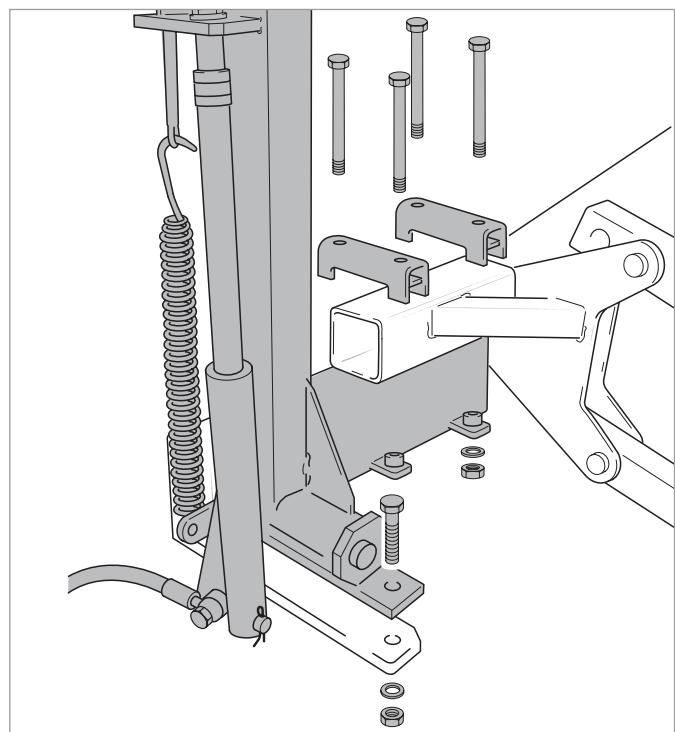

IT IS NOT ADVISABLE USE TO MUCH THE SPRING PRESSURE, TO AVOID SERIOUSLY DAMAGES.

THE PRESSURE OIL CAN PENETRATE IN THE SKIN AND CAN CAUSE INJURIES AND FIRES. BE EXTREMELY CAREFUL WITH THE HYDRAULIC CONNECTIONS AND TUBES.

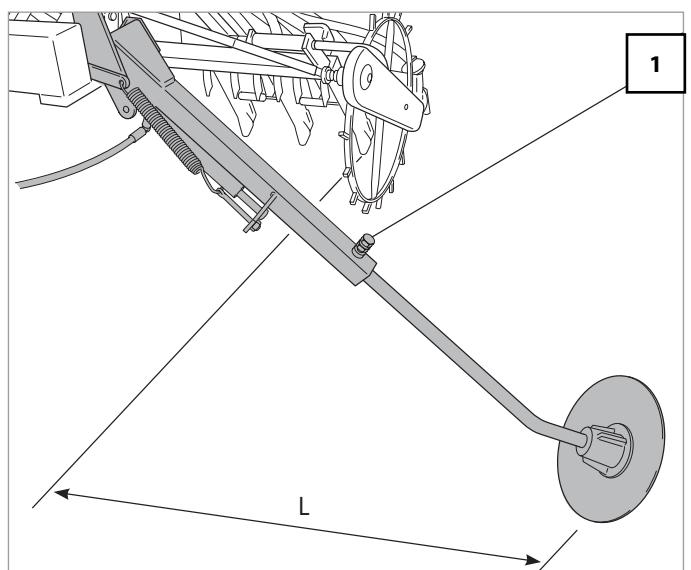

NO PERSONS MAY BE ALLOWED TO STAND WITHIN THE WORKING AREA.

Track markers are fitted in the laterals of the folding equipment. The right marker is fitted on the short support and the left marker on the long support. Their operation is hydraulic and we have to connect them to two different connectors for working in an indistinctly way. It is very important to fold the track markers and fix them with the bow pin before folding the machine for transporting.

The track markers arms are extending. We can adjust them in length and we can position the discs on the correct penetration inclination. The spring allows to adjust the disc pressure on the ground. The length of the track markers is calculated as follows:

$$\text{L} = \frac{\text{working width seed drill - track gauge wheels tractor} + \text{width of the row}}{2}$$

For setting the track markers:

- To loosen the bolt.
- Setting the track marker.
- Fix the position by the screw.
- Fix the bolt.

## 6. CONTROL MONITORS

### 6.1 CONTROL BOARD

This monitor is fitted as a standard in the machine. It shows the values and we can not entry in the programming.

The screen shows 6 channels and 3 arrows indicating the situation.

**C1:** show the speed en m/sec.

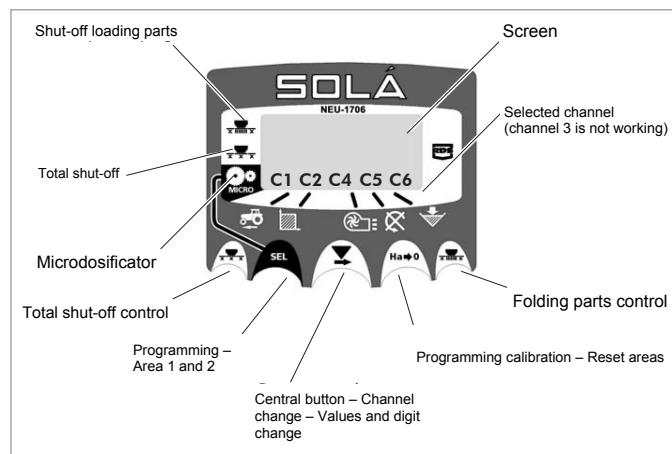

**C2:** show two different hectares (ex. Partial and total).

**C3:** is not working.

**C4:** show the fan speed (rpm).

**C5:** show the distributor speed (rpm).

**C6:** show the seed level.

The information shown on the screen is the speed. A signal alarm and the word "alarm" on the screen appears when there is an error. The alarm does not disappear until the problem is solved.

To visualize the reading we want, press the central button and move the channel. After 10 seconds, the reading returns to C1.

### 6.2 ADVANCE SPEED – C1

To select the channel by the central button. Below 2.6 km/h, the alarm goes off. We can deactivate the alarm going to he programming mode 2.

#### Speed sensor calibration

We can obtain a theoretical calibration acceding in the programming mode 2.

**1.** Select the speed channel (C1).

**2.** Press "SEL" to access in mode 1. Keeping pressed it, press the central button (v) for changing the digit.

**3.** Keep the central button pressed during some seconds to modify the digit value according to the following chart.

300	350	400
1,340	1,340	1,340

**4.** The monitor will returns to the normal position.

**NOTE:** It exists a way to calibrate the number of boosts. This system is more precise and it requires a test on the land.

#### Speed sensor calibration

**1.** Mark 100 mts.

**2.** Select channel 1 (speed)

**3.** Press "SEL" and keeping pressed, press "Ha-0". On the screen will appears AutO.

**4.** Cover now the marked 100 metres. The monitor counts the sensor boosts.

**5.** To finish press "Ha-0" again. The monitor has memorized the boosts number.

### 6.3 TOTAL AREA / SEED DRILL WIDTH – C2

We can mark two total areas and independents one of the other.

#### Total area visualization

**1.** Select channel 2.

**2.** Press "SEL" to see total area 1 and total 2 "tot.1" and "tot.2". First we visualize on the screen "tot.1" and then its value in Ha.

#### Total areas reset

**1.** Select channel 2.

**2.** Press "SEL" to visualize.

**3.** Press during more than 5 seconds the button "Ha-0".

### 6.4 FAN SPEED / ALARMS – C4

#### Fan speed display

Select channel 4 by the central button.

#### Fan speed alarms

We can program the minimal speed of the fan turns. Below 2 km/h the alarms are deactivated.

#### Minimal speed of the fan

**1.** Select channel 4.

**2.** Press "SEL" during more than 5 seconds and keep press.

**3.** Press central button to change digit and value. By default 3800 rpm.

**4.** To return to the normal position do not press the button.

#### Boosts number selection by fan turn (by default 2).

**NOTE:** The number of boosts by fan turn is always 2. Only we have to access in programming mode in case of error.

**1.** Press "SEL" while we connect the monitor by the rear switch, to access in mode 2.

**2.** Press "SEL" for changing channel and go to channel 4 (fan).

**3.** Press central button to modify the flicking digit and keep pressed to modify its value (always must be 2).

**4.** Depress to return to the normal position.

## 6.5 DISTRIBUTOR - C5

Select channel 5 by central button. When the axis stop, after 40 seconds the alarm sounds (5 beeps). If the axis does not turn the alarm repeats each 30 seconds. To stop the alarm, stop the monitor and activate it again. The alarm of the axis can stop pressing the button "Ha-0" during more than 5 seconds. Screen shows "Off". In this situation the alarm does not work.

## 6.6 LEVEL HOPPER ALARM – C6

When the seed level is low a signal alarm (5 beeps) will warns and on the screen appears ALAr.

Activate and deactivate the hopper seed level alarm.

- 1.** Select channel 6 by central button
- 2.** Press button "SEL" and...
- 3.** Press central button for selecting "0" (deactivated) or "1" (activated)
- 4.** Depress to return to the normal position.

# 7. MAINTENANCE

## 7.1 GREASING

Grease every day all the articulations of the transmission.

## 7.2 SCREW WORKS

After some working hours, all bolts must be verified and tightened if necessary. We supply a special key, a tube key, located inside the hopper, for the hold-down screw.

## 7.3 DISTRIBUTOR HEAD AND TUBES

Before working it is very important to verify that the seed delivery tubes and the distributor head are not blocked.

For this, with the operating fan and with the full hopper:

- We will give some turns to the wheel.
- verify that the seed falls through the arms.
- switch-off the machine
- disconnect the head cover to verify that anything is inside.

## 8. DOSAGE TABLES

THE QUANTITIES SHOWN AT THE TABLES ARE FOR GUIDANCE ONLY. THE FLOW CAN CHANGE DUE TO PRESERVATION POWDERS, SEED SIZES, DENSITY, HUMIDITY...

FOR A PRECISION SOWING, WE ADVISE YOU TO FOLLOW THE DOSAGE

### NEU 2512 (3M)

SEED	Spec. weight (kg/l)	Regular seeds kg/ha (Bolt in position N)										Adj. dosing scale value										Fine seeds kg/ha (Bolt in position F)									
		GRASS					CLOVER					RAPE					GRASS					CLOVER					RAPE

## 9. SPARE PARTS

The terms **RIGHT, LEFT, FRONT and REAR** refer to the machine in its starting direction (fig. 39).

When guidance describes parts that have a matching pair (symmetrical handles, wheels etc) only one will be demonstrated in the drawings shown. Please search for the distinguishing reference in the spare parts list.

The number and type of the machine can be found on the machine's **IDENTIFICATION PLATE**, on the front part of the frame.

BE CAREFUL WHEN MAINTAINING THE SEED DRILL,  
 SHARP EDGES CAN CAUSE INJURY.

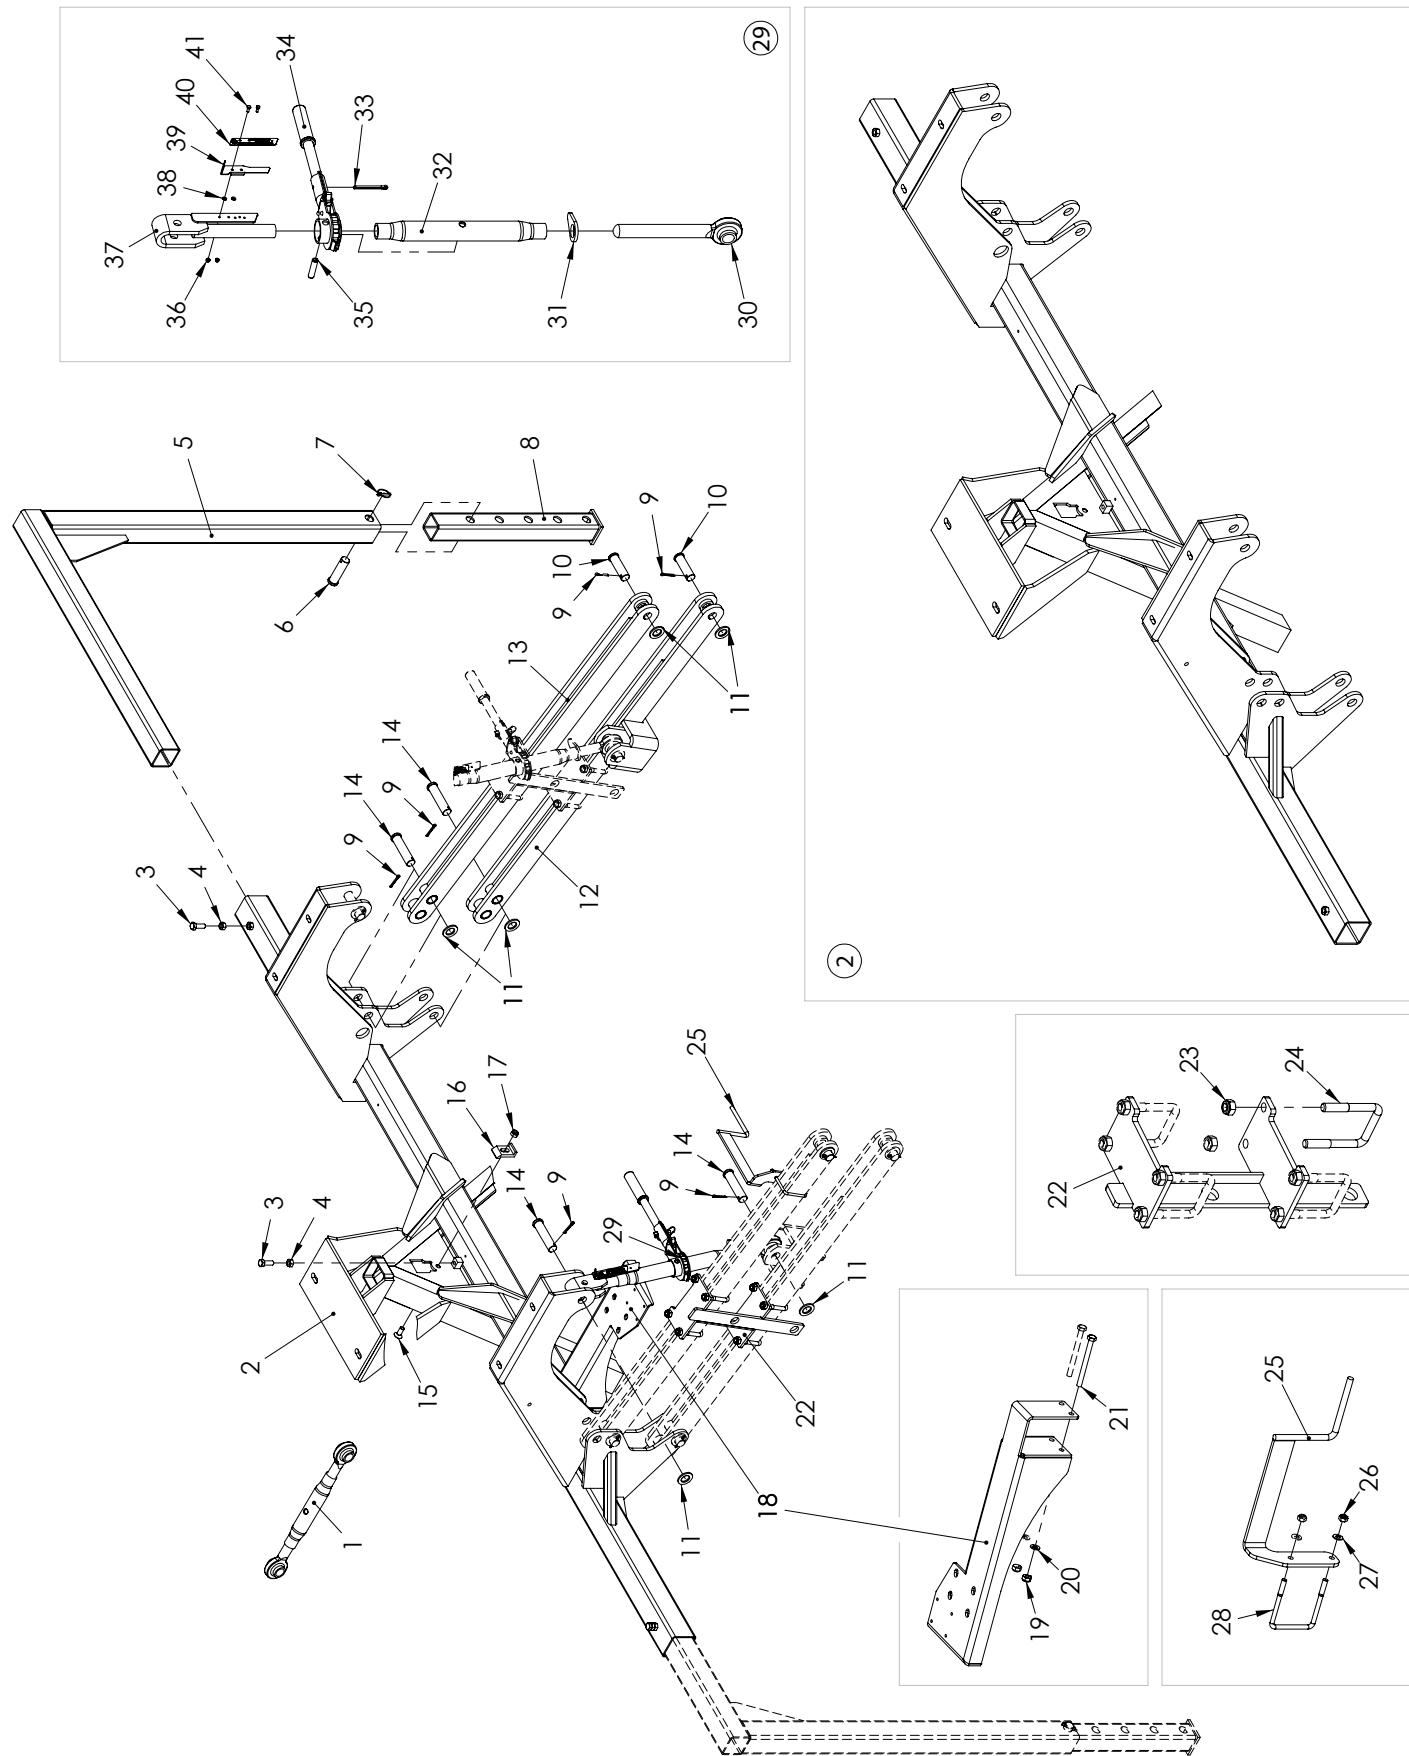

DO NOT WORK UNDER THE MACHINE WHEN IT IS RAISED.
